

Get the advantage of experience and quality outcomes from the largest provider of perfusion services

SpecialtyCare® participates in 130,000+ open heart surgeries and other perfusion-related procedures every year. With more than 500 dedicated perfusionists across the country, we serve as fully integrated members of each local team while also providing the expertise and breadth of knowledge that comes from having a national presence and the industry's largest multi-institutional operative registry—a database that gives us the ability to conduct unparalleled perfusion-related research.

DATA-DRIVEN INSIGHTS LEAD THE INDUSTRY

As the largest provider of perfusion services, we collect clinical data from hundreds of facilities—from small community hospitals to large university medical centers. With the data from these programs, our Medical Office is uniquely positioned to conduct research on the emerging trends, best practices, and innovative techniques that advance patient care. We are committed to sharing these industry insights with our customers and equally committed to providing surgeons, OR directors, and administrators with reliable metrics and benchmarks for goal setting and continuous improvement. When paired with the certainty of our exceptional perfusion services, this helps our customers achieve the greatest patient outcomes.

SUCCESS IN THE OR. SUCCESS OVERALL.

At SpecialtyCare, we understand that the OR plays a vital role in the overall success of a hospital. That's why we offer more than high-quality clinical expertise. We fully integrate with the team to gain familiarity with the surgeons and other OR professionals so that we can anticipate their needs, drive satisfaction, work at top efficiency, and ensure cost-effective care. It's all part of our commitment to help our customers create operating rooms of excellence.

EXPERTISE AND EXPERIENCE

We have built a strong reputation by following evidence-based practice guidelines for perfusion, ECLS/ECMO, and related modalities. We can also institute new ECLS/ECMO programs, destination therapy, intraperitoneal hyperthermia, and other courses of treatment. All this is backed by experienced SpecialtyCare managers who ensure quality, consistency, and reliable program coordination.

CERTIFIED PROFESSIONALS

We are proud to employ the country's largest group of professional perfusionists who can advise on clinical practice, clinical quality, and new developments. Certified by the American Board of Cardiovascular Perfusion (ABCP), we stay current through annual competency evaluations and maintain evidence of credentialing onsite so that you are always ready for unexpected audits by The Joint Commission.

CLINICAL QUALITY INDICATOR PROGRAM

Our robust Clinical Quality Indicator Program focuses on improving patient outcomes by emphasizing the adequacy of perfusion, anemia management, and intraoperative glycemic control. This is accomplished through the quantitative analysis of a comprehensive list of perfusion-related metrics that reflect patient management, including net prime volume, perfusion flow rates, base excess, highest intraoperative glucose, red blood cell transfusion, and lowest hematocrit on cardiopulmonary bypass. These local performance data drive patient outcomes, operational improvements, and cost savings at the hospital and OR level.

SAVE ON EQUIPMENT AND DISPOSABLES

Our customers save money by outsourcing, especially when in-house volumes do not warrant significant expenditures for staffing and capital. National buying power enables us to provide equipment and disposable products at competitive rates. Plus, our certified technicians work closely with our perfusionists to ensure that all equipment is maintained to meet or exceed manufacturer standards for operation and safety.

PERFUSION SERVICES

- Autotransfusion
- Adult and Pediatric Cardiopulmonary Bypass
- Ventricular Assist
- Extracorporeal Life Support (ECLS)
- Extracorporeal Membrane Oxygenation (ECMO)
- Isolated Limb Perfusion
- Intraperitoneal Hyperthermia (IPH)
- Anticoagulation Monitoring
- Blood Gas Monitoring
- Transplantation Services
- Intra-Aortic Balloon Pump
- Platelet Rich Plasma (PRP)
